

Managed mobile productivity

Microsoft Enterprise Mobility + Security

The mobile productivity your people want, the data protection your company needs.

It's one of today's most important business challenges: how to empower users to be productive wherever they are, while protecting the **massive amounts of data moving through your mobile environment**. Microsoft Enterprise Mobility + Security (EMS) provides the tools to achieve both – for maximum mobile productivity.

01

Keep people productive from virtually anywhere, on any device

Empower your users to do great work using the devices and apps they love, by delivering mobile experiences that work the way they should, right from the start.

- Single sign-on
- Device positioning
- Auto updates
- Microsoft Office apps
- Self-service

01

02

Freedom to work from any device

03

With EMS, people can **work securely from virtually any phone, tablet or PC** – whether it’s corporate-owned, employee-owned, or a third-party managed device (**such as a kiosk** or contractor-supplied device).

Productivity right from the start

EMS allows you to configure a device with policies and certificates so users can easily access email, Wi-Fi, apps, and other corporate resources – ensuring that devices are productivity-ready with minimal user setup.

Streamlined access to all apps

Provide the convenience of single sign-on access to **thousands of cloud and on-premises applications with one unified identity**. This includes Microsoft Office apps as well as support for Salesforce, Concur, Workday, and thousands of other popular SaaS apps.

Managed Mobile Productivity

The Office experiences people expect

Give your people the familiarity of the real Microsoft Office experience, while maintaining unparalleled control over the data that moves through **Outlook, Word, PowerPoint, Excel, and Teams.**

Empower your users with self-service capabilities

With EMS, users can perform a variety of tasks without having to contact IT or helpdesk. Self-service options include password/PIN reset, as well as the ability to join and manage groups. Users can also get access to apps and invite external partners to collaborate within corporate apps.

03

02. Protect your data at every turn

With EMS, only the right people, under the right conditions, can access your company data. What's more, apps and data stay protected – even after they've been accessed.

- App encryption at rest
- App access control
- Save as/copy/paste restrictions
- App-level selective wipe
- Managed web browsing
- Windows 10 information protection
- Secure viewing of PDFs, images, videos
- Restrict features, sharing, downloads

01

02

03

Enable users to share files securely

Allow protecting and sharing sensitive data with **people inside and outside of your organization.** You can also control and track what happens after a file has been accessed, with the ability to prevent copying, printing, and other actions that help control sharing with unauthorized users.

Control access to data based on real-time context

With conditional access, you can define policies that control access to your corporate data based on a variety of conditions, including user, location, device state, application sensitivity, and real-time risk. As conditions change, controls kick in to ensure that your data is protected with the ability to **challenge users with multi-factor authentication, block access,** provide access with limited functionality, prompt for device enrollment, or even **wipe data from the device.**

Protect apps with comprehensive policies

Office Mobile and other apps can be protected with a rich set of app protection policies, like the ability to restrict copy/paste and save-as. This protects apps and data both before and after access. With EMS, you can protect data at the app level without the need for device enrollment.

01

02

03

03. Empower your IT team

Give your administrators the tools and support to manage your diverse mobile ecosystem more strategically and proactively.

- Company Managed
Information worker / Shared
- Employee Managed
Primary / Companion
- Third-Party Managed
Public Work / Contractor

01

Tackle mobile complexity with flexible management options

02

EMS allows you to protect at the user, device, app, and file levels, giving you an incredible amount of flexibility and choice in how you solve for a variety of needs within your organization. You even have the option to protect corporate data on unmanaged devices, enabling data protection across a wider range of scenarios.

03

Manage everything from one unified, modern console

Our Azure-based portal gives you a unified EMS administrative experience that allows for streamlined management of core EMS workflows across Azure AD and Intune. You can also manage devices, users, and groups with nearly unlimited scale.

Simplify user lifecycle management

With a single identity across all IT functions, integration with HR applications, and the use of dynamic groups, you can simplify provisioning of users across application during every phase of their lifecycle in the organization. Manage who has access to what when employees join or leave the company or when they move across teams.

Managed Mobile Productivity

Simplify, automate, and integrate workloads

Microsoft Graph API connects developers to the data that drives productivity – mail, calendar, contacts, documents, directory, devices, and more. EMS gives you the capability to connect different services and automate workflows and processes between them.

Deployment planning and ongoing support set you up for success

FastTrack provides access to a team of engineers dedicated to helping you plan and execute your EMS deployment. And our 24/7 global support keeps you running strong day to day. Both services are included with your EMS subscription.

Cloud architecture that just works

As a cloud solution that integrates with your on-premises infrastructure, EMS takes the worry out of maintenance and updates. You get the confidence of knowing that your system is always up to date and **ready to scale globally** as your needs change.
